Meade is a large utility contractor. We build, maintain and repair overhead and underground electric & gas systems. We are a Contractor of Choice for Commonwealth Edison and we are performing maintenance for Indianapolis Power & Light Company. We have also worked for many other electric utilities for over 100 years.

We've helped many utilities restore their storm-damaged systems. We've helped utilities in the south when hurricanes Katrina and Ike hit as well as utilities in the Midwest when winds and ice took out many of their customers.

Call us 24/7 when you need help. We have up to 60 crews to help you. Our crews have all the support equipment required to do the job – trucks, material handlers, diggers, trailers for material and poles, equipment for underground and rear lot work – all the equipment for every kind of restoration work. Our in-house mechanics help maintain the fleet. If you need greater than 60 crews we can coordinate them through our storm partnerships.

General Capabilities

- Overhead & Underground Electrical Construction/Repair/Operation
- Natural Gas Transmission & Distribution Construction/Repair/Operation
- Substation Construction
- Traffic Signals & Lighting
- Telecommunications
- Engineering Design
